

enlight

An optimized raycasting approach for subtractive manufacturing
simulation and visualization

RISC
Software GmbH

Regio 13
Impulse für OÖ
Regionale Wettbewerbsfähigkeit OÖ 2007–2013

Industrial components – e.g. impellers

Milling - Subtractive manufacturing

Overview

- Problem specification
- Basic visualization approach
- Optimization I, II, III
- Results

Problem specification

Input for digital simulation

MeshLab screen shots of low resolution input meshes

Problem situation

MeshLab screen shots of low resolution input meshes

Existing methods – e.g. marching cubes

0	1.stl *	File	1.stl
		Faces	610
		Vertices	307
5	1953.stl *	File	1953.stl
		Faces	1680
		Vertices	842
11	difference *	File	
		Faces	238112
		Vertices	119054

Explicit surface calculation using MeshLab

Basic visualization approach

Rendering 3D geometry

- Rasterization
(OpenGL, DirectX)
- Ray tracing/casting

Ray casting

Swept volumes - entry/exit counting

Triangle ray intersection

Fast, Minimum Storage Ray/Triangle Intersection,
Möller & Trumbore, 1997

$$[-D, V_1 - V_0, V_2 - V_0] \begin{bmatrix} \mathbf{t} \\ u \\ v \end{bmatrix} = O - V_0$$

Ray casting result and coloring

Per ray/pixel

- Distance/position
- Normal vector of hit triangle

OpenGL integration - Composition

- Write calculated color values directly to frame buffer (glDrawPixels)
- Fast
- Color calculation entirely on CPU

OpenGL integration - Retriangulation

- Triangulation on CPU
- Full graphics pipeline on GPU

Optimization I

Reducing intersection tests

Acceleration structures

- Trees
 - K-d trees
 - Octrees
 - Bounding volume hierarchy
- Regular grids

Regular grid

- Simple
- Fast modifications

Traversal – 3D DDA

- A fast voxel traversal algorithm for ray tracing, John Amanatides and Andrew Woo, 1987

Optimization II

Reducing triangle count

Optimizing triangle count

Screen shot of selected triangles in MeshLab

Cell classification

inside
outside
surface

Triangle reduction

Optimization III

Hardware architecture

Vectorization and memory locality - Packets

- Ray tracing animated scenes using coherent grid traversal, Ingo Wald et al., 2006

Results

Runtime benchmark

Visual quality

Master thesis

- "Detailed and adaptive surface reconstruction of implicitly defined geometries"
- Regular grid with swept volumes as input
- Will (hopefully) calculate exact surface as triangle mesh
- See you in December ;)
